What is the function of automobile transmission system ...

It is the system of automatic transmission that contains oil pumps, governor and hydraulic valves that controls the brake or clutch band by sending pressurised fluid through the valve body in order to control the epicyclic gearbox, The band are connected to the hydraulic system through the shift valve and the output shaft is connected to the hydraulic system through the governor used.

Auto-recloser or auto-reclosing scheme exactly does this. In an overhead transmission system, 80% of the faults are transient, and 12% of faults are semi-permanent. In auto-reclosing scheme if the fault is not cleared at first attempt, there will be double or triple shorts of reclosing until the fault is cleared.

Thus Automatic reconnection called Auto-reclosing, can be performed for OH Transmission and Distribution circuits. From Auto-reclosing perspective, it becomes very important therefore to understand types of faults which can occur in OH T&D circuits and amount of risk involved in auto-reclosing and its advantages.

Once you put the

How Automatic Transmissions Work

A semi-automatic transmission tries to combine the advantages of the manual and automatic transmission systems, but avoid their disadvantages. However, the complicated design of the semi-automatic transmission is still under development, and the price is not cheap. It is only used for some luxury or sports cars currently. Inside the N-series M23 Transmission from Auto Gear ...

Just like that of a manual transmission, the automatic transmission's primary job is to allow the engine to operate in its narrow range of speeds while providing a wide range of output speeds.. Without a transmission, cars would be limited to one gear ratio, and that ratio would have to be selected to allow the car to travel at the desired top speed.. If you wanted a top speed of 80 mph, then ...
