In physics, an anyon is a type of quasiparticle that occurs only in two-dimensional systems, with properties much less restricted than the two kinds of standard elementary particles, fermions and bosons. In general, the operation of exchanging two identical particles, although it may cause a global phase shift, cannot affect observables.Anyons are generally classified as abelian or non-abelian.

Sentiment Analysis (SA) is an ongoing field of research in text mining field. ... They proposed the use of multi-dimensional Bayesian network classifiers. It joined the different target variables in the same classification task in order to exploit the potential relationships between them. ... Open problems. The analysis illustrated above gives ...

Sentiment analysis algorithms and applications: A survey ...
Pólya/Szegő, Problems and theorems in analysis I and II These are very old books of very good problems, mostly from analysis, with complete solutions. They're old-fashioned of course, but the polite word is "classical"; worth reading for culture, to prepare for your quals, or (important!) to see if you can still do concrete calculations ...

The trolley problem is a series of thought experiments in ethics and psychology, involving stylized ethical dilemmas of whether to sacrifice one person to save a larger number. The series usually begins with a scenario in which a runaway tram or trolley is on course to collide with and kill a number of people (traditionally five) down the track, but a driver or bystander can intervene and ...
