Heterotrimeric G proteins are membrane-associated and, along with G protein-coupled receptors (GPCRs), function primarily in cell signalling and signal transduction. Small GTP-binding proteins function in diverse cellular processes including signal transduction, cytoskeletal reorganization, and vesicle trafficking (Takai et al., 2001).

The Science. Brain biotransport: The burden of brain diseases has increased substantially over the last 25 years and will continue to grow in coming decades. Our brain is a complex system with blood flow and vessels that supply nutrients but restricts passage of most other molecules, and neuronal network that is maintained and modulated by the extracellular "chemical connectome".

The cell membrane (plasma membrane) is a thin semi-permeable membrane that surrounds the cytoplasm of a cell. Its function is to protect the integrity of the interior of the cell by allowing certain substances into the cell while keeping other substances out.

### Cell Membrane Function and Structure

Membrane, in biology, the thin layer that forms the outer boundary of a living cell or of an internal cell compartment. The outer boundary is the plasma membrane, and the compartments enclosed by internal membranes are called organelles. Biological membranes have three primary functions: (1) they keep toxic substances out of the cell; (2) they contain receptors and channels that allow specific ...
