Rudin's Real and Complex Analysis is an excellent book for several reasons. Most importantly, it manages to encompass a whole range of mathematics in one reasonably-sized volume. Furthermore, its problems are not mere extensions of the proofs given in the text or trivial applications of the results- many of the results are alternate proofs to major theorems or different theorems not proved.

We will assume here familiar computational facts about the real numbers, including the existence of a real number  $\sqrt{2}$ , though Rudin does not formally introduce the real numbers till several sections later. (a) By rationalizing denominators, get a non-fractional formula for  $1/(\sqrt{2}+1)$ . Deduce that if  $x = \sqrt{2}+1$ , then  $x = (1/x)+2$ .
