In the field of optics, transparency (also called pellucidity or diaphaneity) is the physical property of allowing light to pass through the material without appreciable scattering of light. On a macroscopic scale (one where the dimensions investigated are much larger than the wavelength of the photons in question), the photons can be said to follow Snell's Law.

Teaching Strategies • Emphasize to students the importance of pouring the liquids slowly down the side of the cylinder. If they are poured quickly, the layers will mix at the boundaries. • Be sure students add the liquids in the order specified. Adding a more dense liquid to one that is less dense might cause mixing of the layers.
